Because the best part of IUT is going home

Overview

This system is being developed by an independent startup founded by us. Though not officially a part of the university, the startup is dedicated to serving the IUT student community.

Its core mission is to ease everyday student challenges through innovative digital solutions.

Key System Outputs

1. Ride Confirmation Page

- User: Ride creator/joiner.
- Purpose: Confirmation that a ride has been successfully created or joined.
- Delivery Method: Mobile app screen display + optional push notification.

2. Ride Listings View

- User: Ride seekers.
- Purpose: Display all current ride offers with pickup, destinations, times, seats available.
- Delivery Method: In-app screen (card view) with filtering/sorting capabilities.

Key System Outputs

3. Payment Receipt / Transaction Log

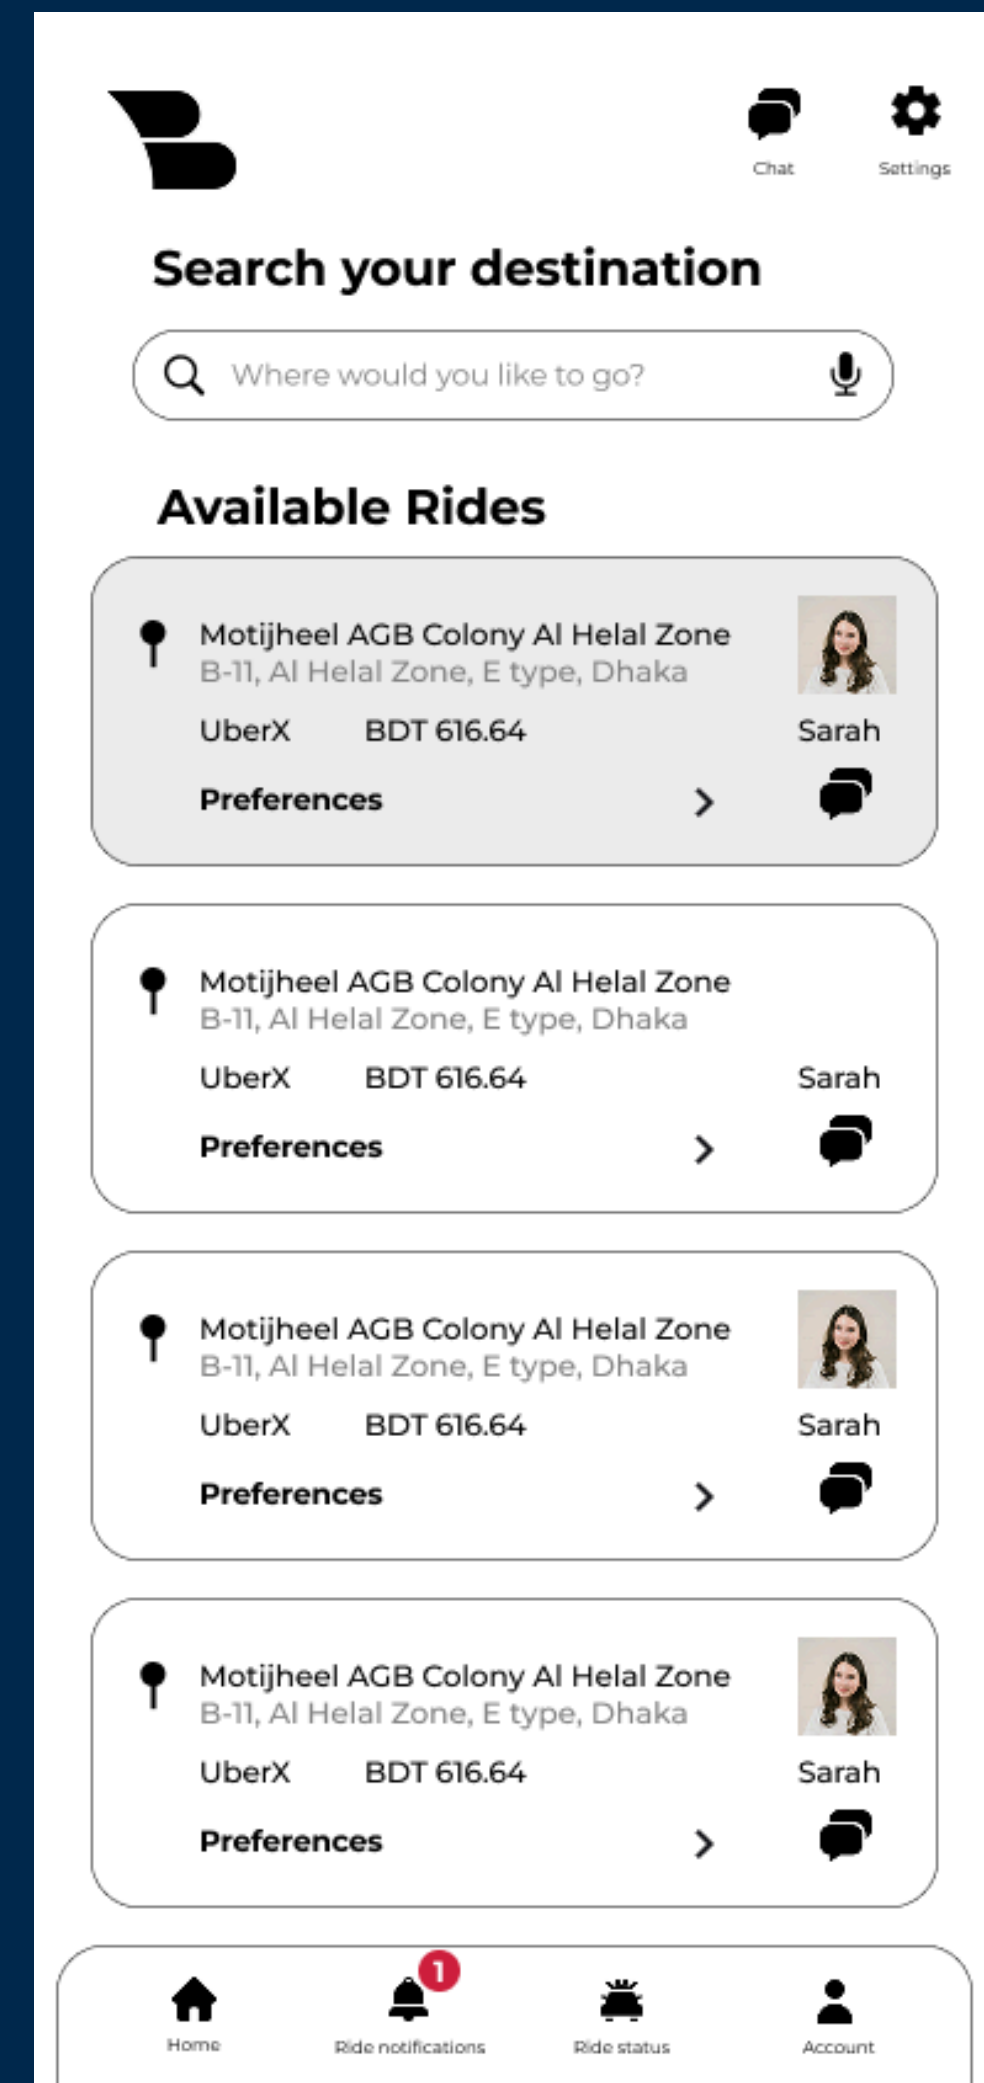

- User: Students.
making/tracking payments.
- Purpose: Record of completed transactions, showing fare split, method used (Bkash/cash, etc).
- Delivery Method: In-app receipt (screen display + downloadable PDF).

4. Ride History

- User: Students.
- Purpose: Provide a record of all past rides the user created, joined, or cancelled. Personal tracking of transport usage.
- Delivery Method: In-app screen (history tab with searchable/filterable list).

Core System Output 1: Ride Listings

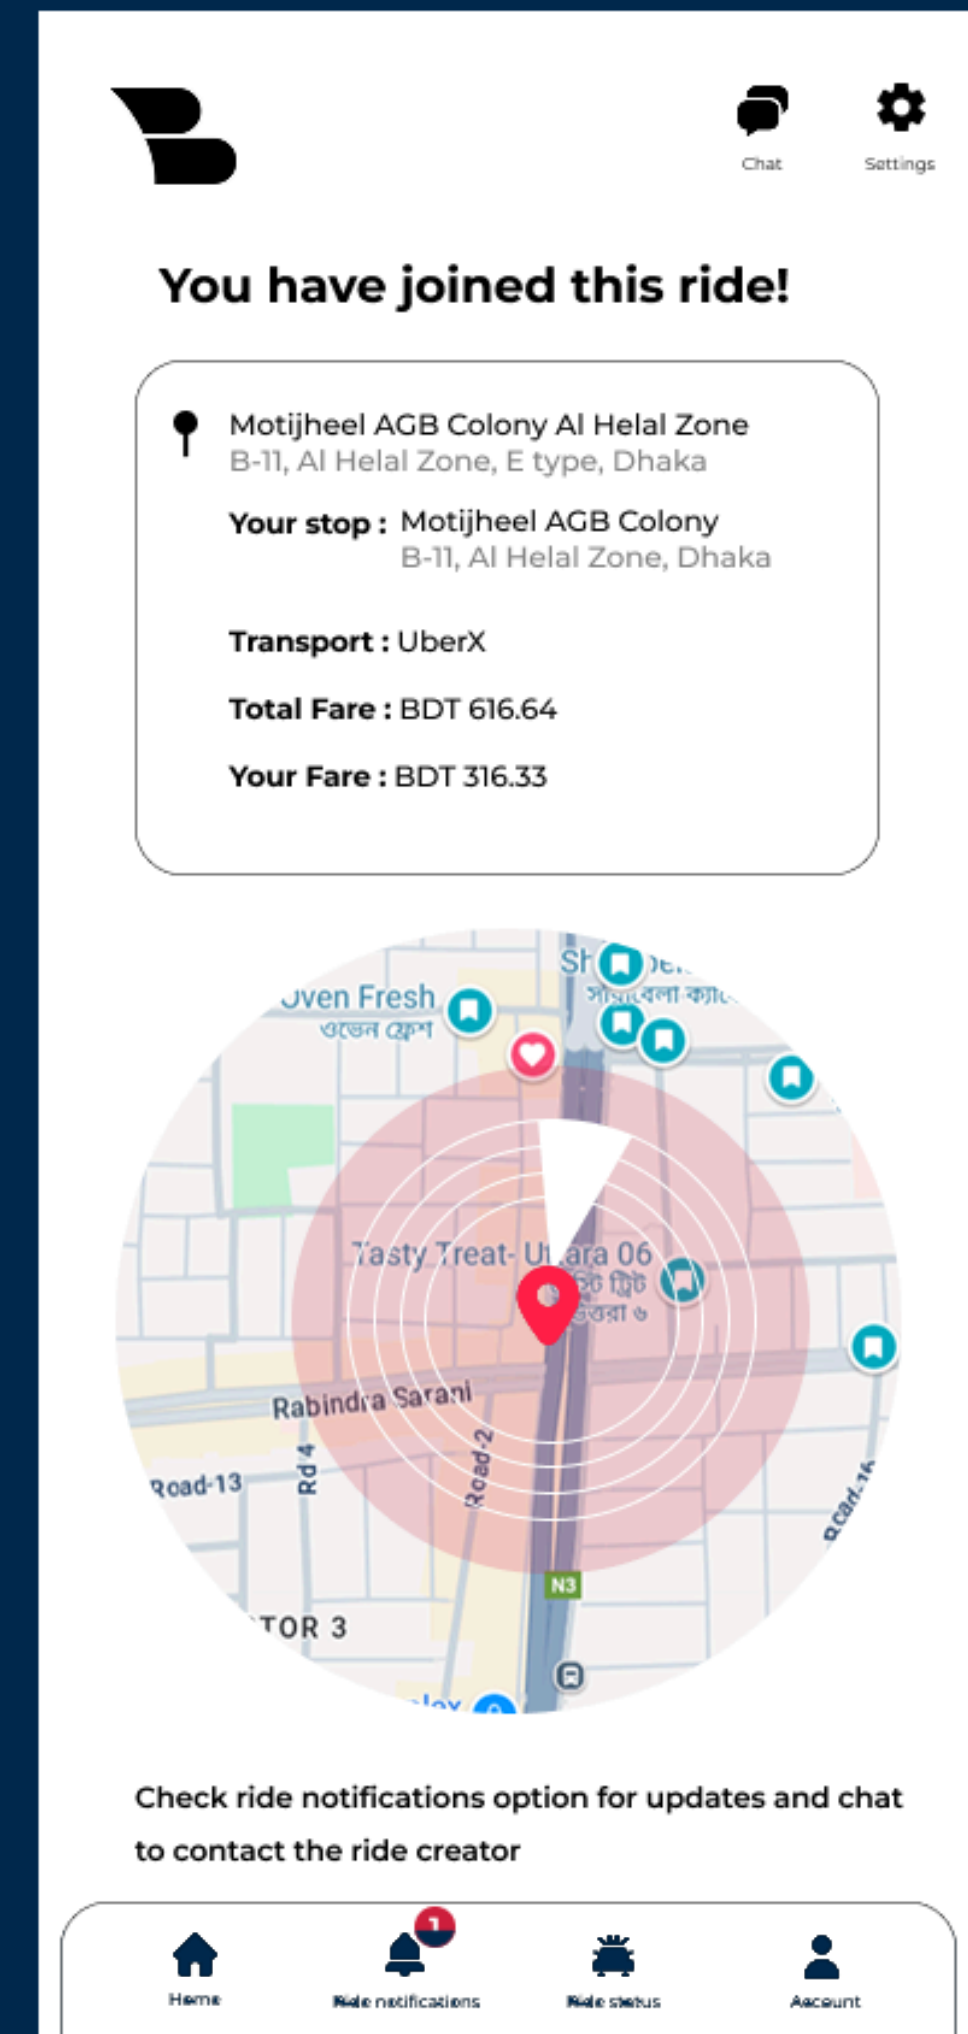

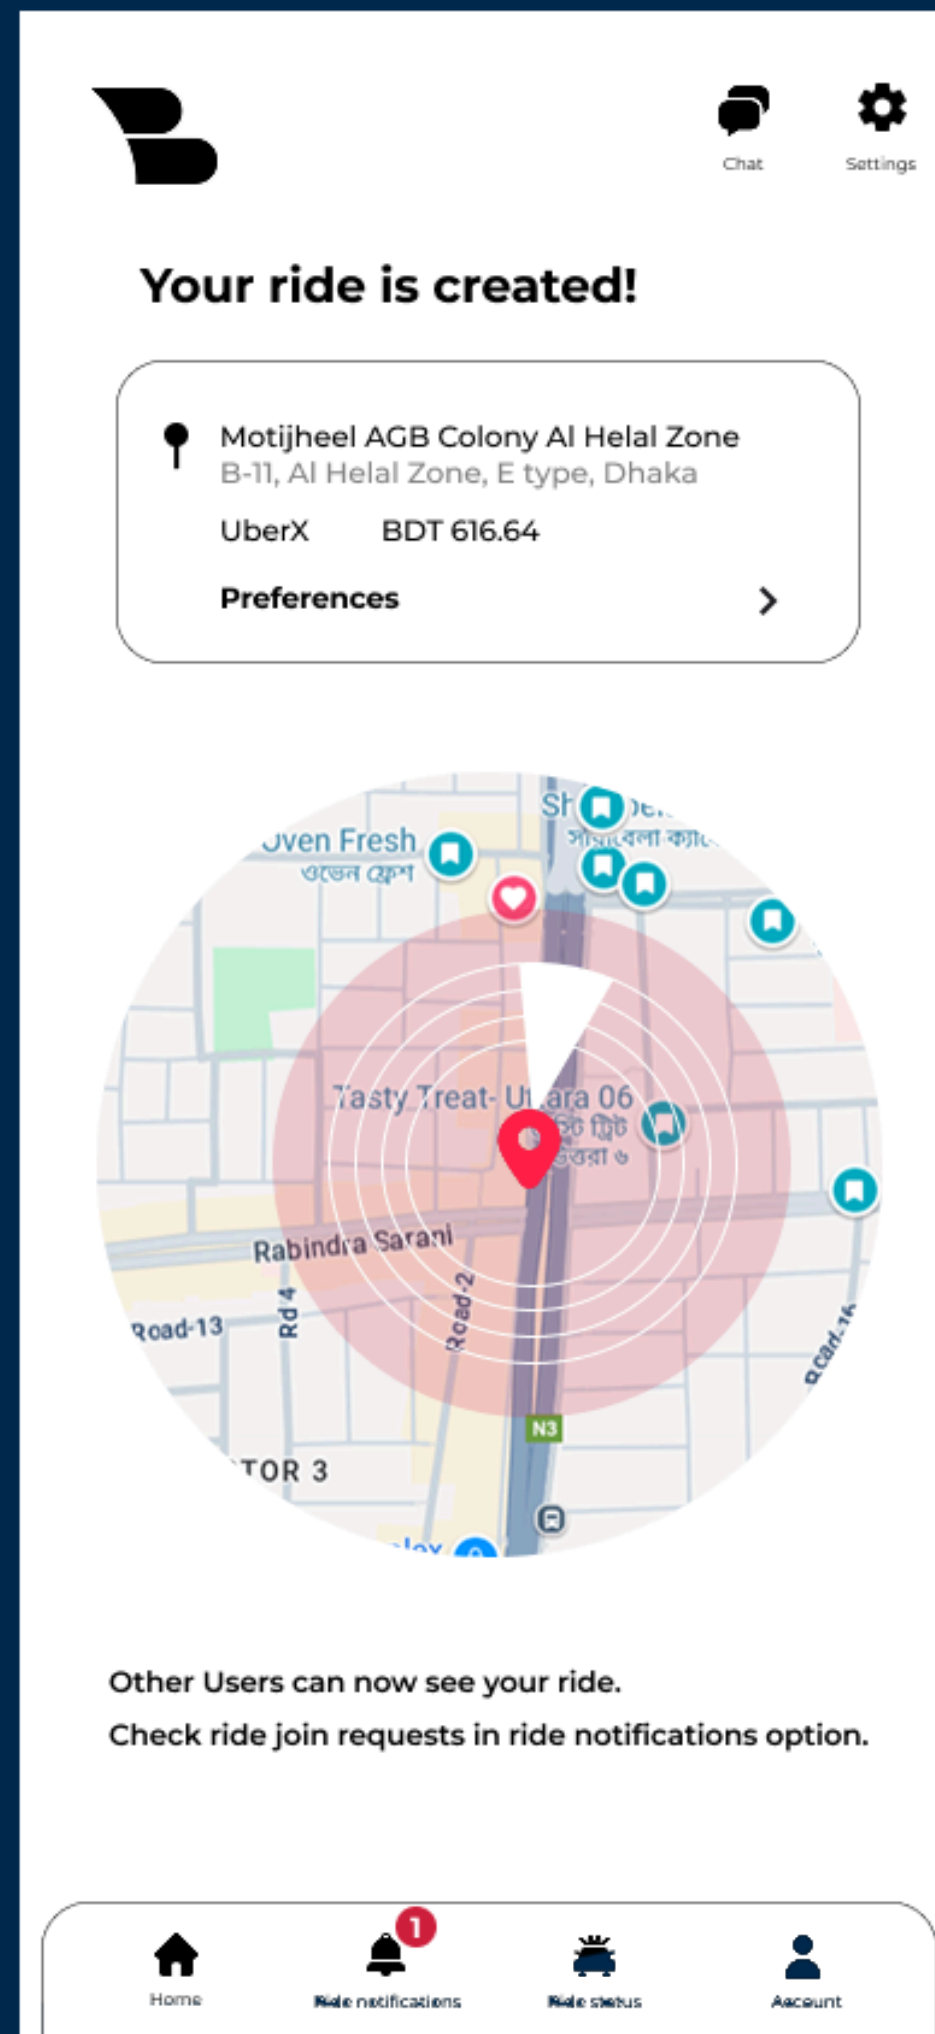

- Available rides are active records in **Rides_Created**.
- Location + preference search system for ride seekers.
- Drop-down for more details on ride creator's preferences.
- Card layout for easy visibility.

Core System

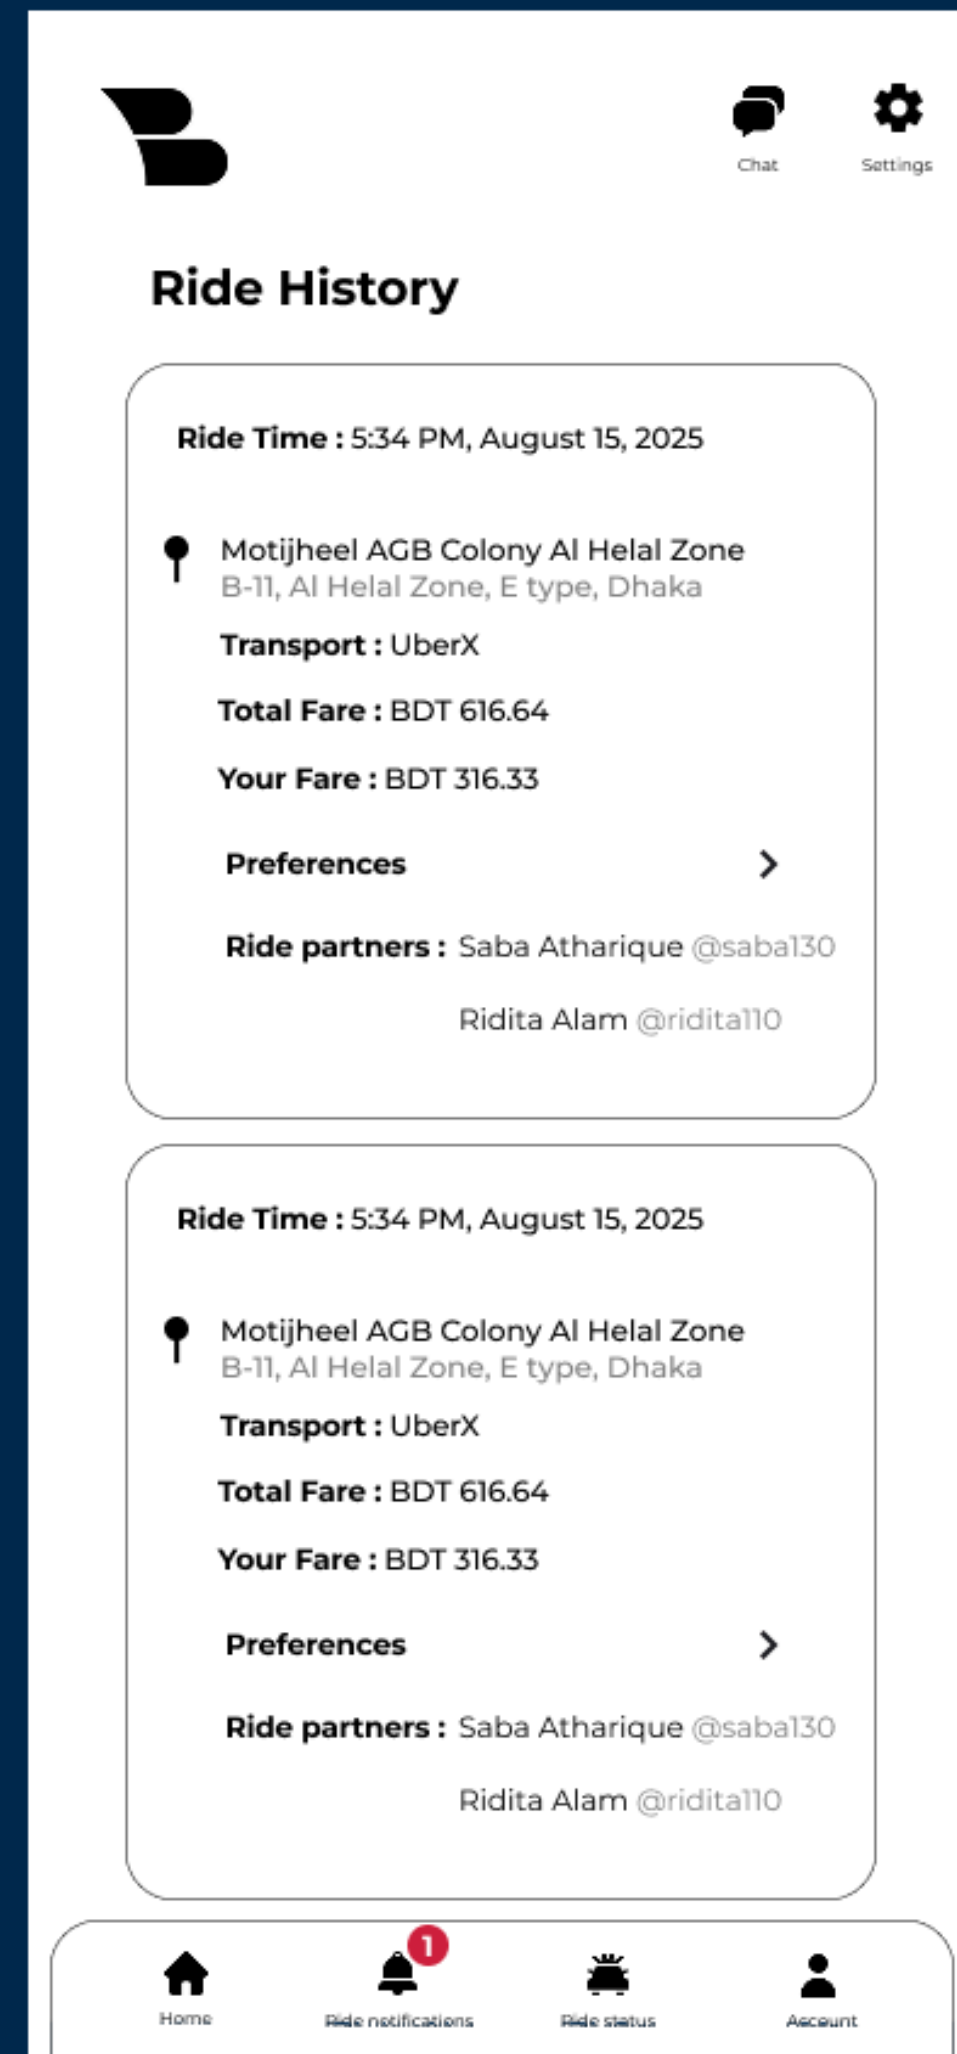

Output 2: Ride Confirmation

- Created rides are stored in **Rides_Created**.
- Joined rides are stored in **Rides_Joined**.
- Drop-down for more details on ride preferences.
- Status message.

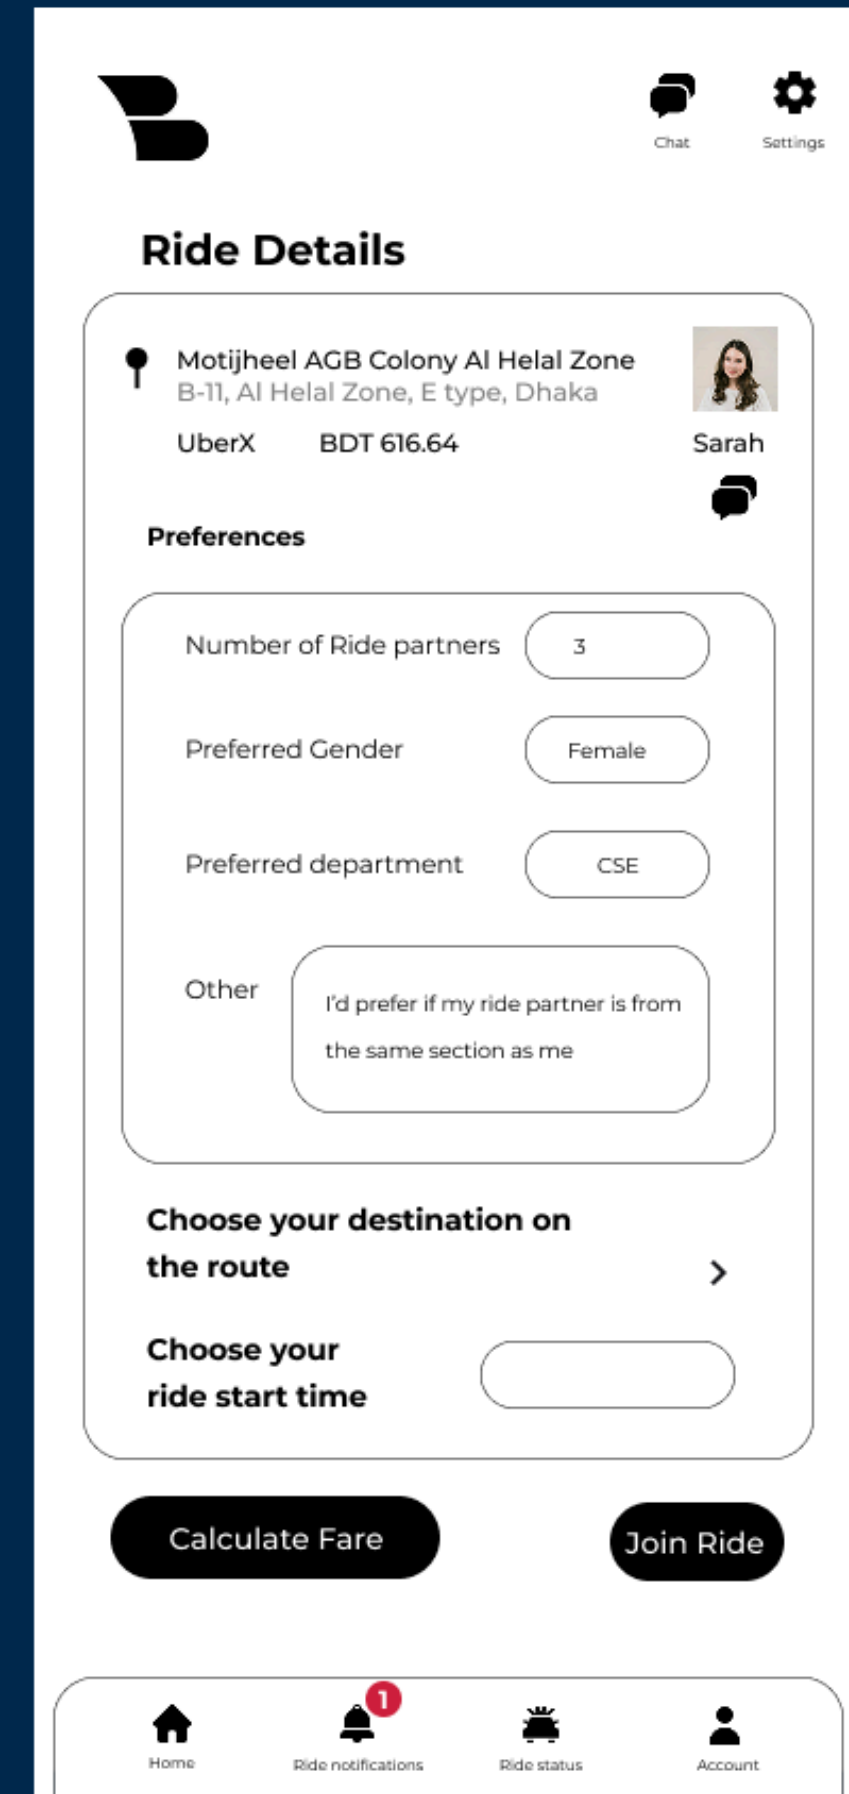

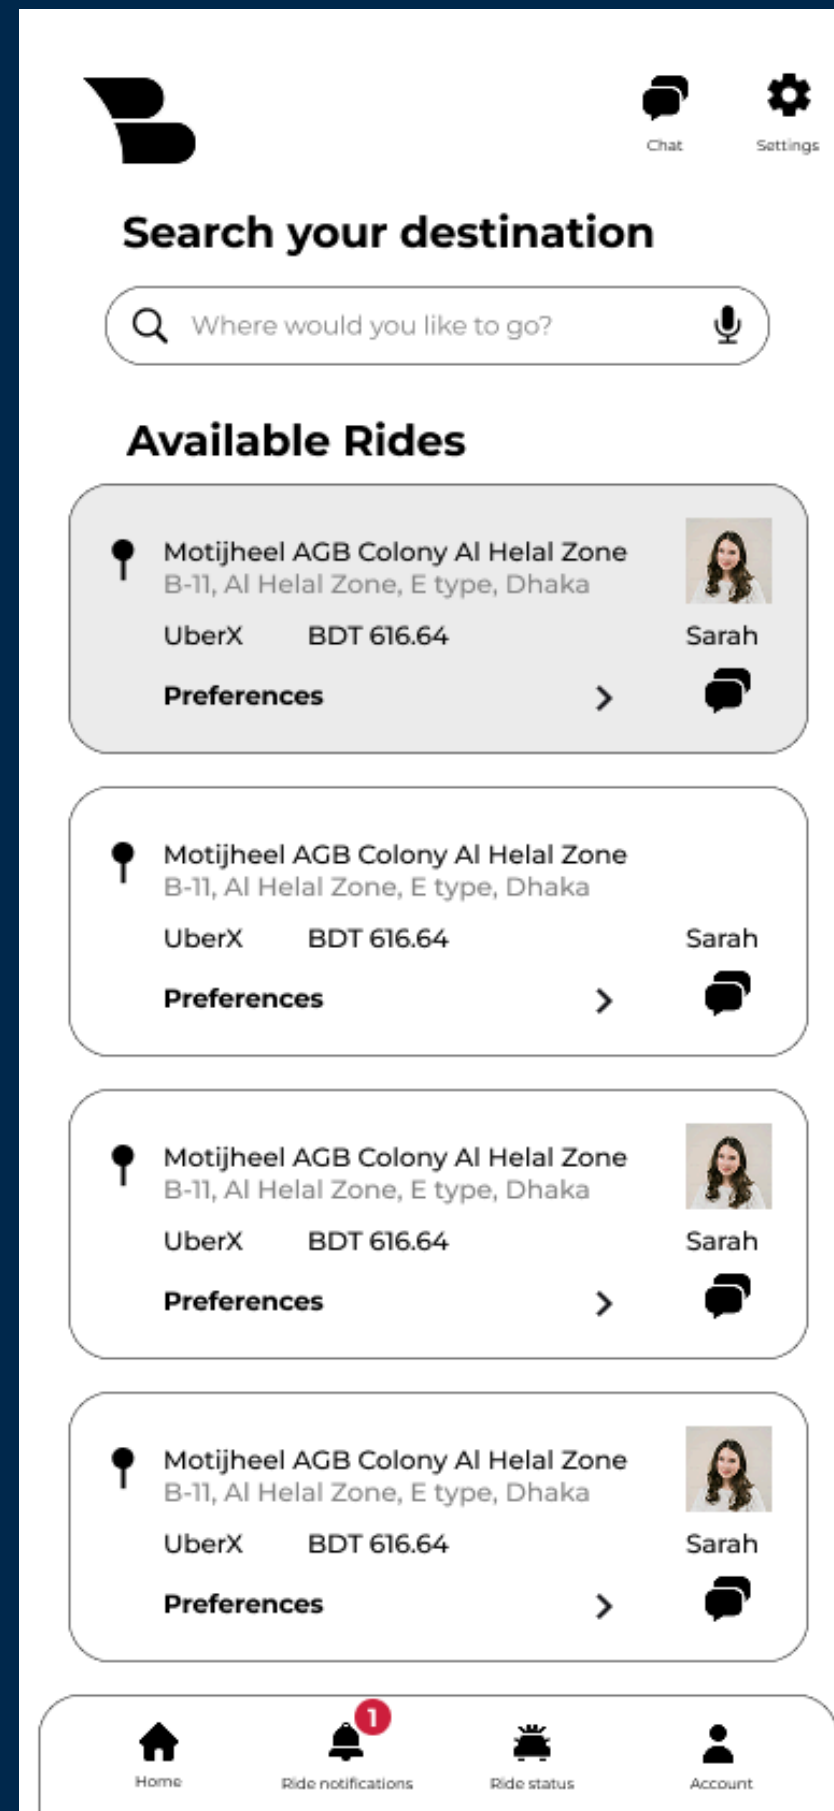

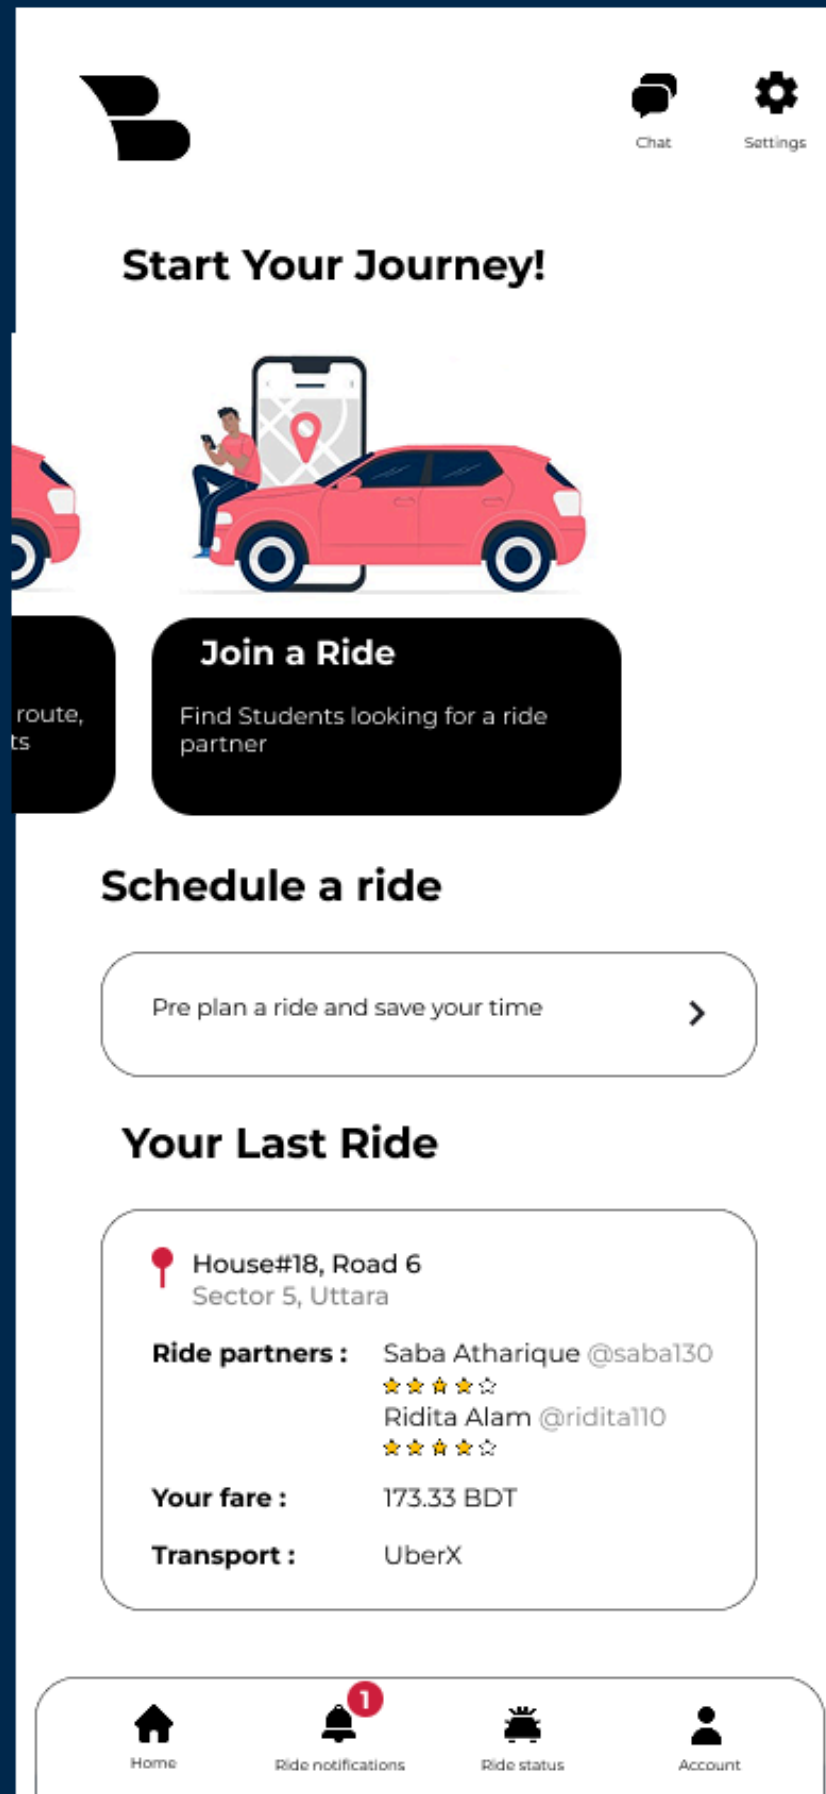

Core System Output 3: Ride History

- All previous/expired rides fetched from **Rides_Created** and **Rides_Joined**.
- Card layout for easy visibility.
- Time, fare breakdown, partners, and location for personal tracking.
- Drop-down for more details on ride preferences.

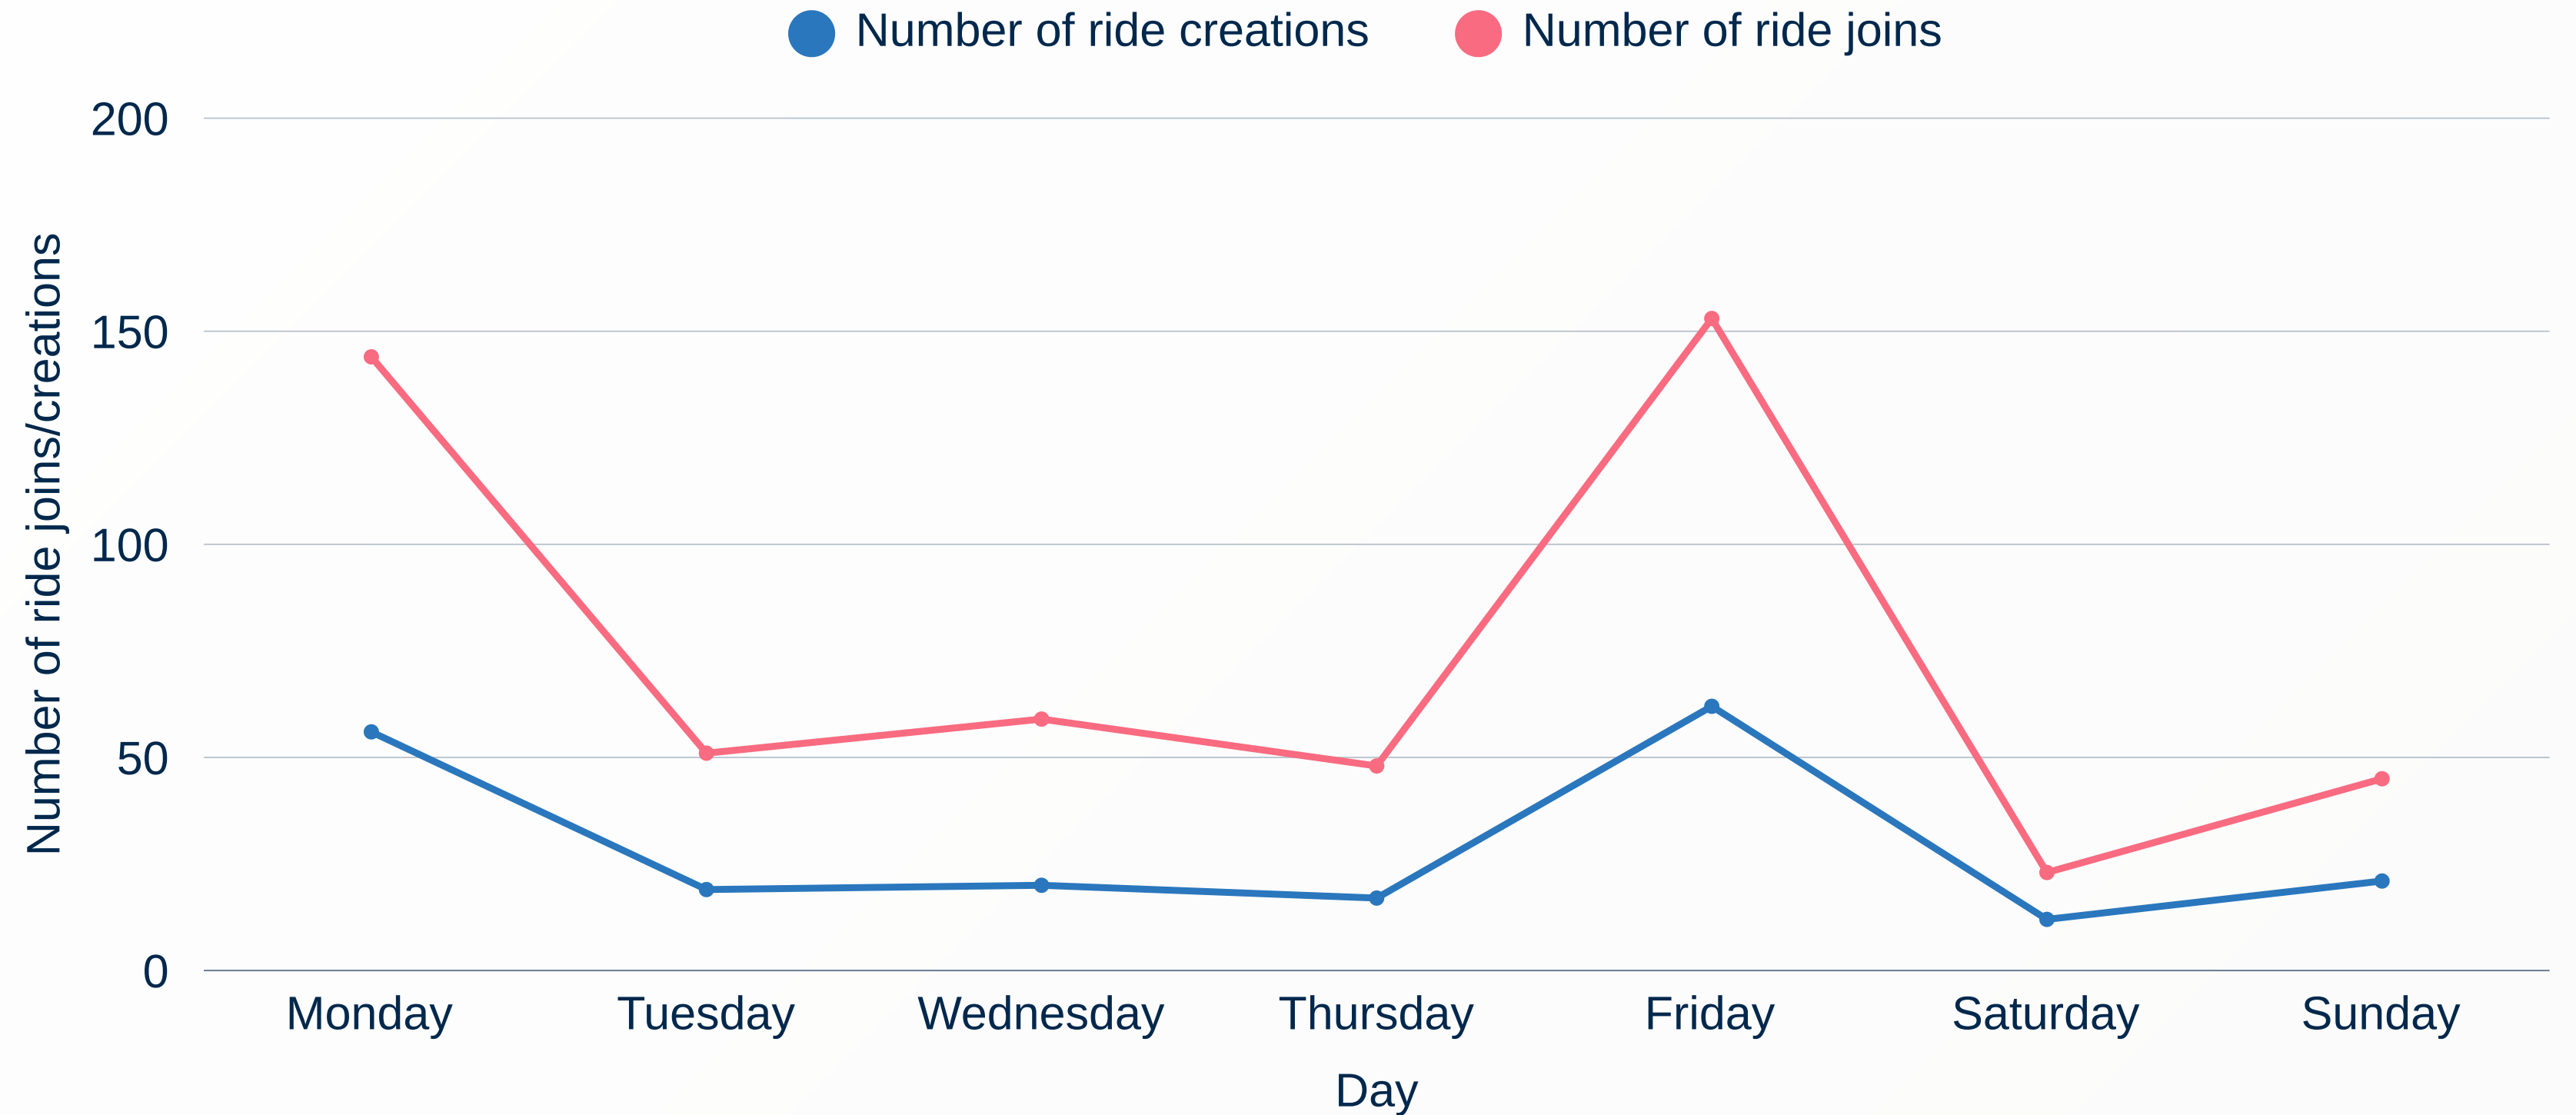

Mobile Interface Output

Data Visualization Output

Average daily ride creation & join requests over 3 months

Why a Line Chart Fits Best

- **Nature of Data:** Time-series (weekly ride requests), line charts emphasize progression and direction over time.
- **Clarity:** Smooth lines + labeled points highlight trends at a glance.
- **Efficiency:** Viewers can identify and interpret trends faster than scanning rows of tabular data.
- **User Need:** Admins want to spot patterns (growth, dips, peaks) to adjust resources quickly.

Thank you!

Welcoming any and all questions
