

A regular day in the city:

- Potholes, hanging wires, broken lights, pollution, waterlogging, open manholes
- *And more.....*

➤ what's the issue?

- *Who* handles this issue here?
- *How* do I file a complaint?
- *When* will they get back to me?

Problems without solutions?

**what's the
solution?**

introduction

What is CityZen?

CityZen is a digital platform that will allow citizens to easily report community problems such as potholes, hanging electric cables, litter, and more.

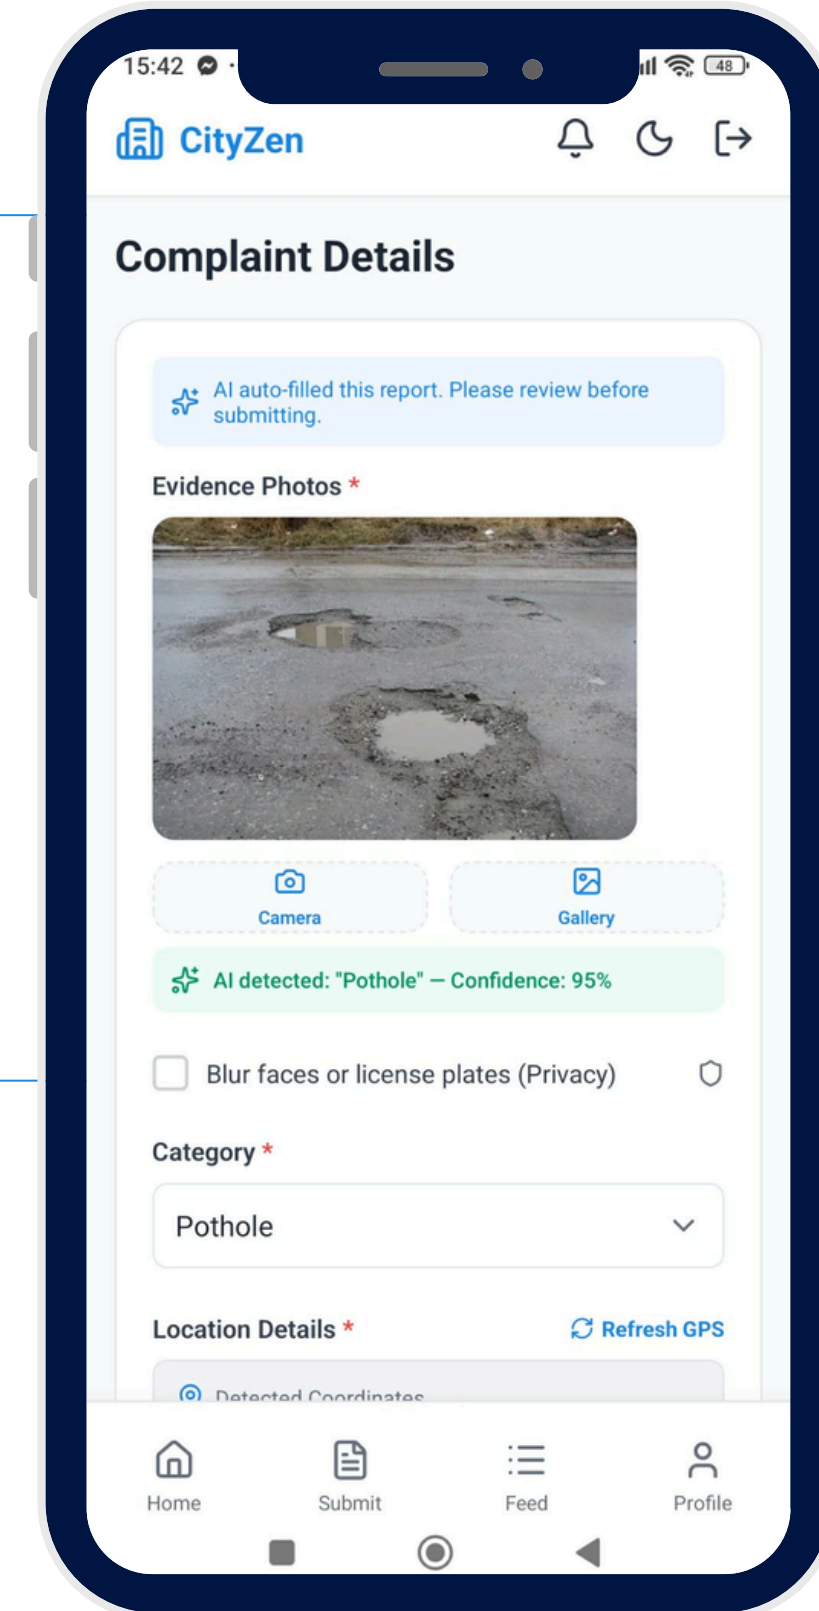

You see a problem. You take a photo. CityZen does the rest. It finds the right authority, files the complaint, and tracks it to resolution.

For Citizens:

- Submit complaints anonymously with GPS tagging, attach photos as evidence
- Track progress in real-time with notifications
- Rate resolution or submit an appeal if dissatisfied
- Upvote issues to highlight community priorities

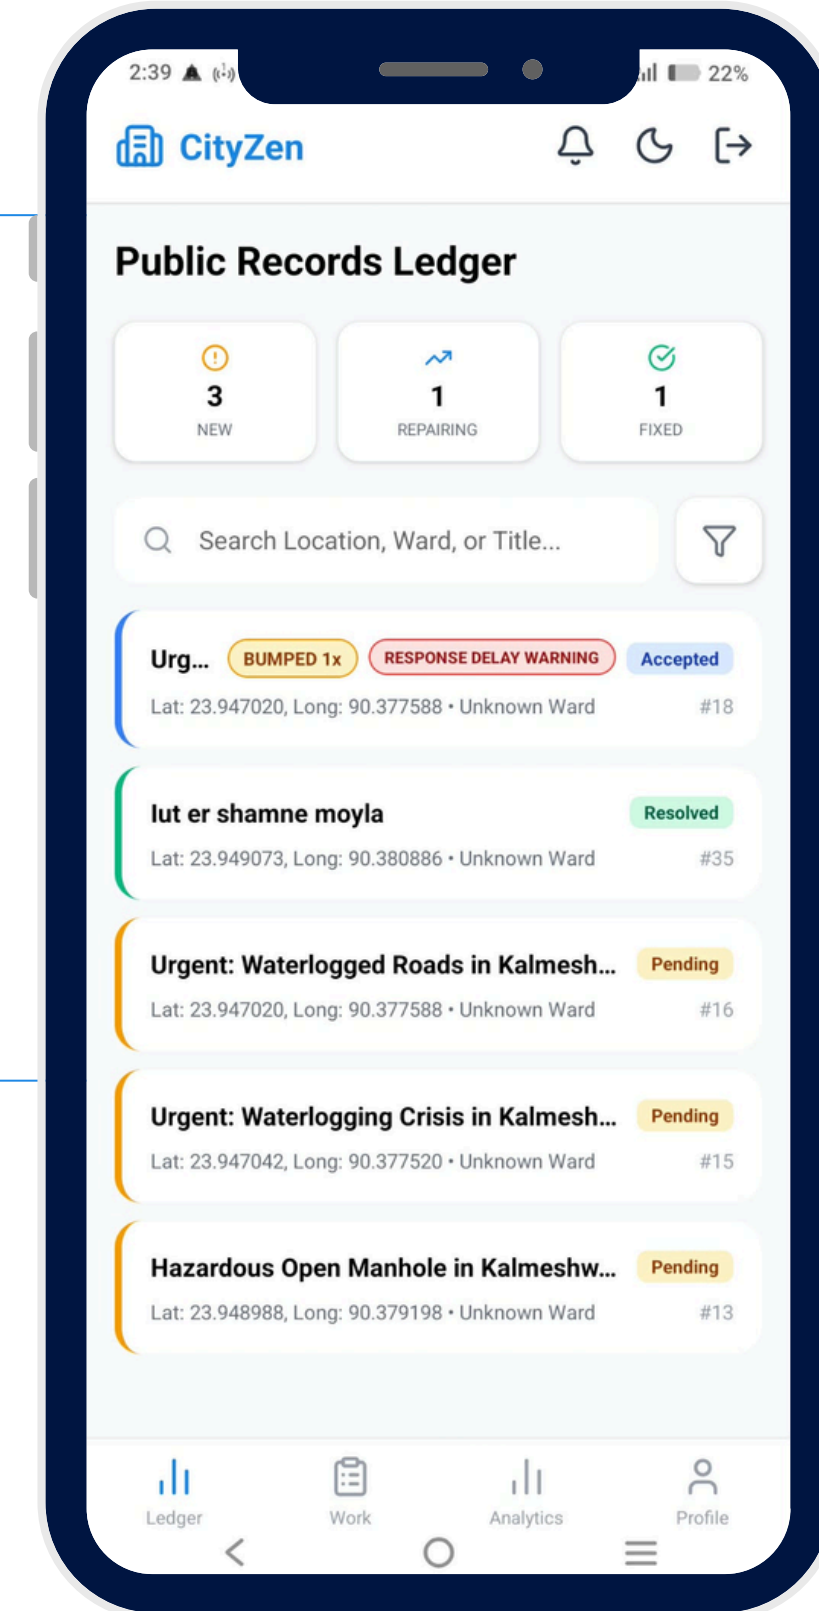

key features

For Authorities:

- Categorize and assign complaints automatically
- Track resolution timelines and notify citizens
- Reduce paperwork, errors, and lost documents
- Analyze complaint patterns for better planning and preventive action

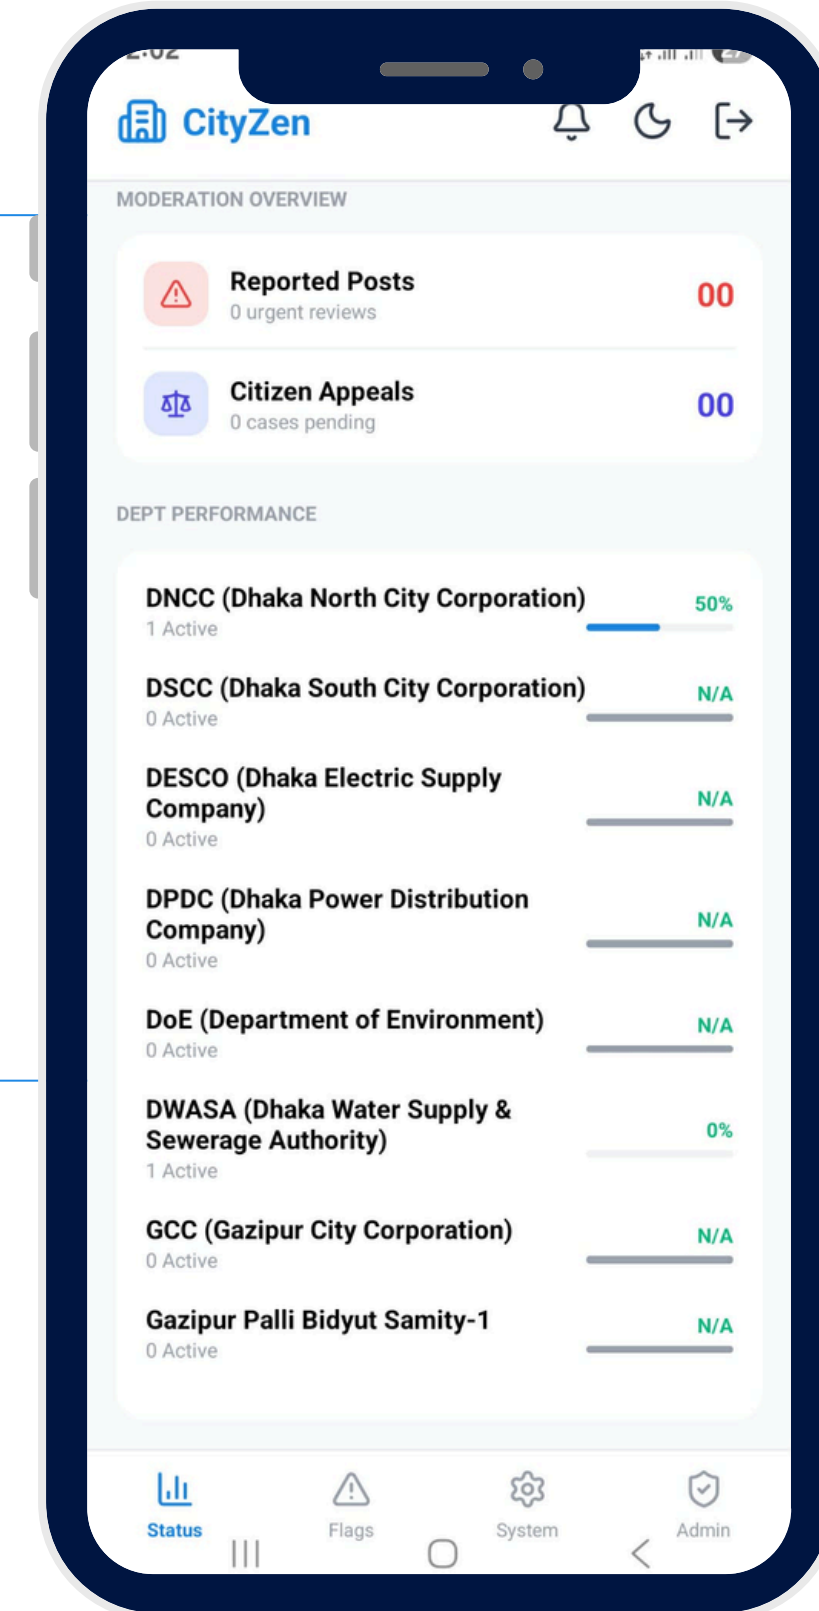

key features

For Admins:

- View, add, and edit Authority companies, areas of service, and issue categories
- Manage user reports, bans, and strikes
- Ensure orderliness and prevent spam or irrelevant content

key features

why CityZen? >

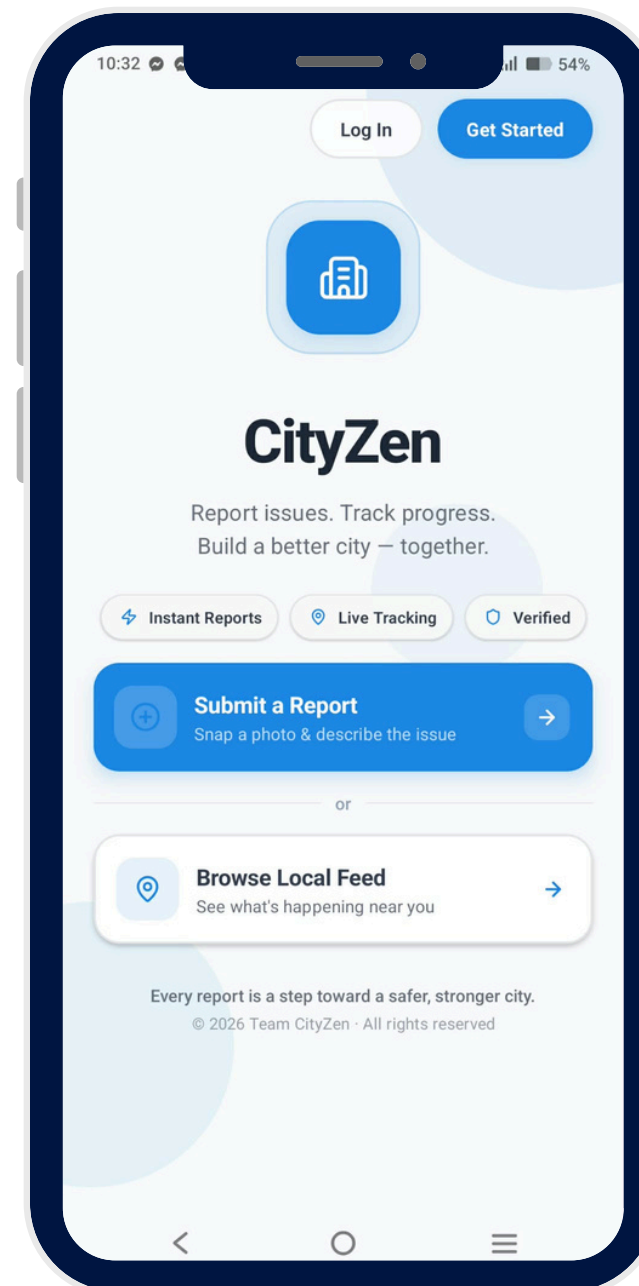

What sets us apart?

1. Precision Field Dispatch

AI identifies the issue, routes it to the right department, and drops a live GPS pin. Right team, right place.

2. Offline Reporting Support

Capture GPS and photos on-site without internet. Syncs when back online, preserving location accuracy.

3. The Escalation Matrix

Bump at 72+ hours and Admin Escalation at 7+ days, guarantees accountability. No complaint dies out.

4. Predictive City Strategy

Live heat maps turn reports into actionable urban planning, so authorities know right where to act.

1. Effortless Scalability

New departments and issue categories can be added by admins. The platform grows with the city.

2. Audit-Ready by Default

Every complaint is tracked and logged – a clean, defensible record without any extra administrative effort.

3. Data-Driven Budget Allocation

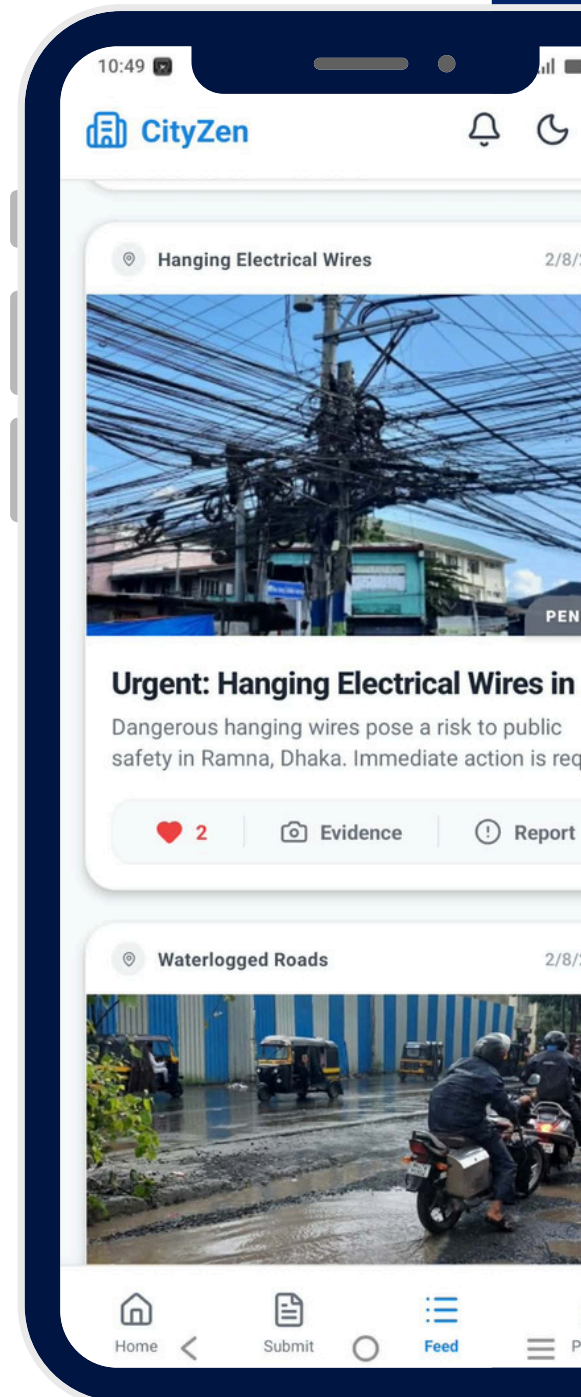

Complaint heat maps give authorities hard evidence to justify infrastructure spending.

4. Reduced Operational Cost

Automated routing, escalation, and tracking replace manual coordination. Staff focus on fixing problems.
